

ABSTRACT

A vibration isolating pipe clip for securing a pipe to a support, in particular for securing a medium-carrying pipe to a wall or ceiling of a building.

The pipe clip comprises a substantially annular, rigid pipe clip body which is composed of one or more parts and is provided with securing means for securing the pipe clip body to a support.

A substantially annular vibration isolating member is provided, this vibration isolating member bearing against the inner circumference of the pipe clip body and ultimately being positioned between the outer circumference of the pipe and the pipe clip body.

The vibration isolating member is made from a porous elastomer material, preferably vulcanized porous rubber with closed cavities and separating walls between them.
